Experiment 1: Build Responsive & Interactive UIs using Tailwind CSS

Aim: Design and verify fully responsive UI layouts across Mobile, Tablet, and Desktop screens with Tailwind atomic utility classes.

Tech Stack / Concepts: Tailwind CSS, Utility Classes, Mobile-First, Flexbox & CSS Grid, Lucide Icons

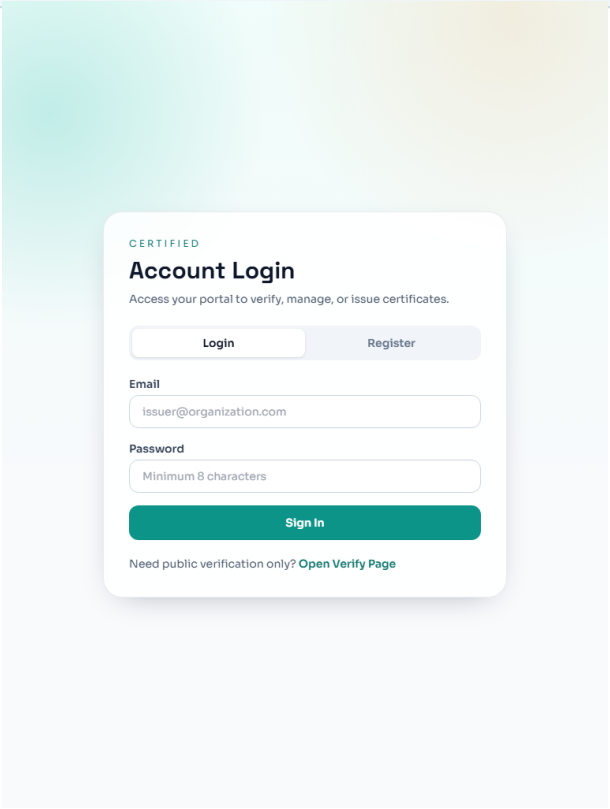

Repository: github.com/JaideepGowda2006/Certified | Student: Jaideep Gowda

Screen 1: Full Desktop 1366px Landing Page & Hero UI

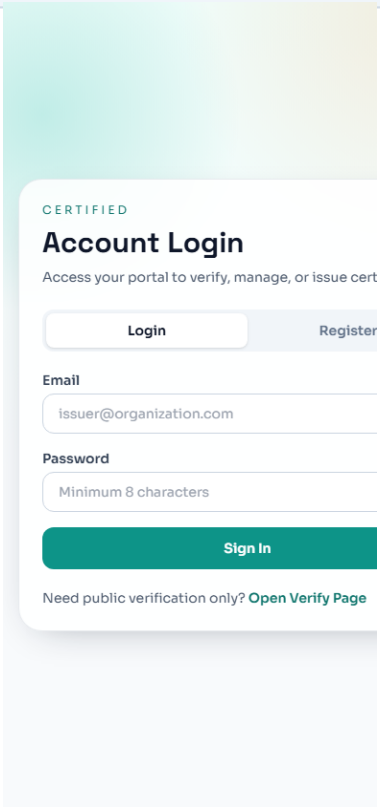

Demonstrating wide viewport flexbox layout, gradient buttons, and dark palette.

Screen 2: Tablet Viewport (768px) Grid Reflow

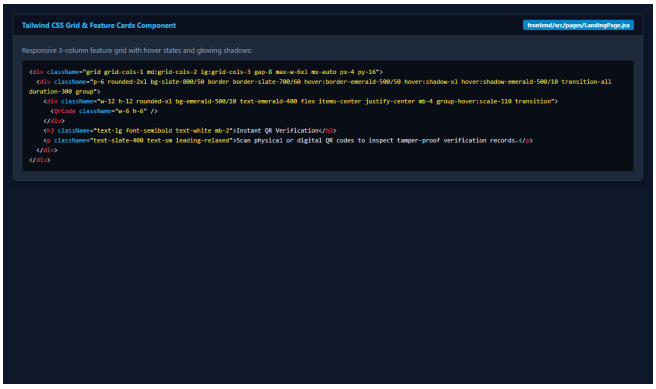

Automatic 2-column card reflow and adaptive responsive header navigation.

Screen 3: Mobile Viewport (390px iPhone View)

Single-column stacked mobile-first cards and fluid touch target spacing.

Screen 4: Tailwind Responsive Utility Classes in Source Code

Implementation of md:grid-cols-2 lg:grid-cols-3 and hover glow states.
