Experiment 5: Create Secure, Production-Ready RESTful APIs

Aim: Secure Express RESTful APIs with Helmet security headers, IP rate limiting, request sanitization, and structured error middleware.

Tech Stack / Concepts: Helmet, HSTS, X-Frame-Options, Rate Limiting, Centralized Error Handler

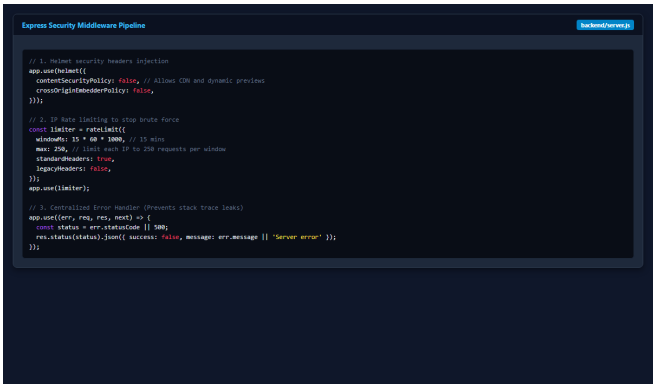

Repository: github.com/JaideepGowda2006/Certified | Student: Jaideep Gowda

Screen 1: Live Healthcheck & Helmet Security Response Headers

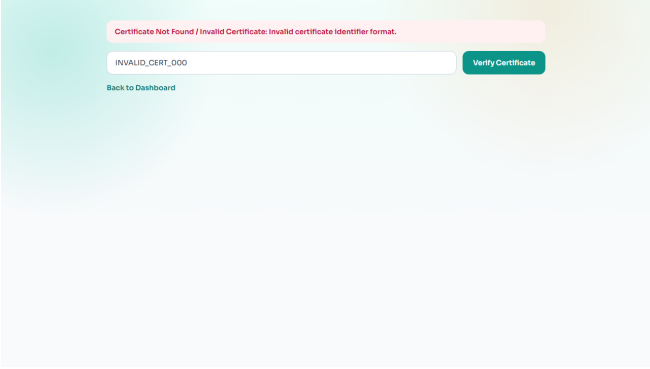

HTTP 200 OK with nosniff, SAMEORIGIN, HSTS, and RateLimit headers.

Screen 2: Express Security Middleware Pipeline Source

RateLimiter setup (250 req/15min) and centralized error middleware.

Screen 3: Structured 404 Error Response without Leaking Stacks

Sanitized error JSON returned to client to protect internal server paths.
