Experiment 6: Implement Authentication & User Roles with JWT

Aim: Implement stateless JSON Web Token (JWT) authorization and Role-Based Access Control (RBAC) separating Admin and Student capabilit

Tech Stack / Concepts: JWT (JSON Web Tokens), bcryptjs, RBAC, Bearer Token, jwt.io Verification

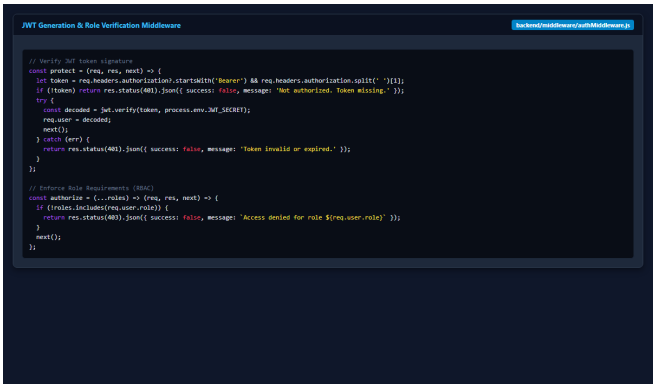

Repository: github.com/JaideepGowda2006/Certified | Student: Jaideep Gowda

Screen 1: Decoded JWT Claims & Signature on jwt.io

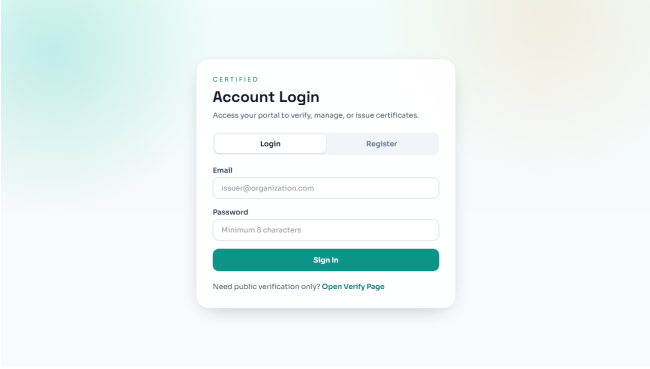

Header, Payload claims (id, email, role: "admin"), and HMAC signature.

Screen 2: protect() & authorize("admin") Middleware Source

Bearer token extraction, verification against JWT_SECRET, and role checks.

Screen 3: Role-Specific Authentication Gateway

Authentication endpoint granting role permissions based on verified credentials.
