Experiment 7: Validating RESTful APIs using Postman / Hoppscotch

Aim: Execute automated regression testing across all authentication, issuance, and verification API routes using Postman collections.

Tech Stack / Concepts: Postman, Hoppscotch, Environment Variables ({{baseUrl}}), Status Assertions, REST

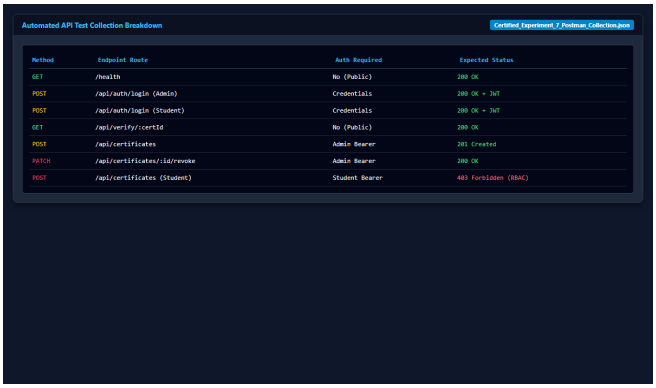

Repository: github.com/JaideepGowda2006/Certified | Student: Jaideep Gowda

Screen 1: Live Hoppscotch Collection Execution View

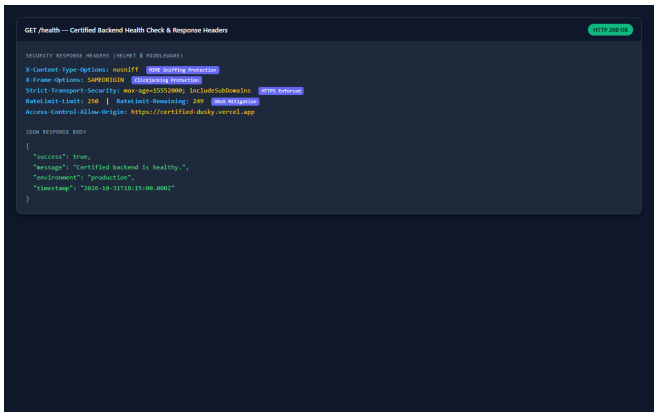

Testing POST /api/auth/login endpoint in browser without local software.

Screen 2: Complete 12-Route Postman Test Matrix

Comprehensive test coverage across public, admin, student, and negative tests.

Screen 3: API Endpoint Health Status Verification

Automated 200 OK status verification and response payload assertion.
