AIM: Deploy full-stack apps using DevOps tools and Docker

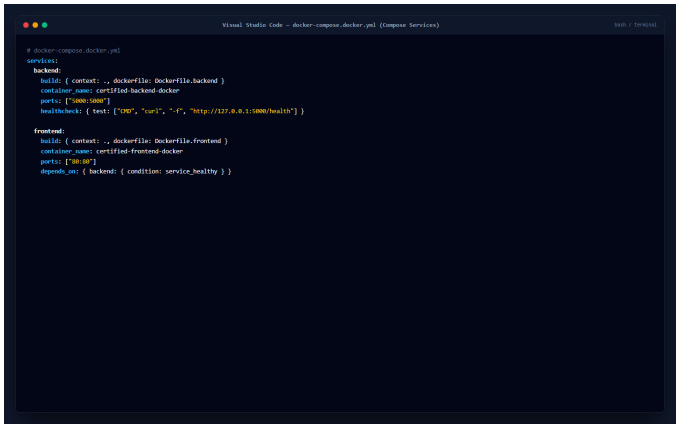

Screen 10.1: Dockerfile.backend - Production Node 20 Alpine Configuration

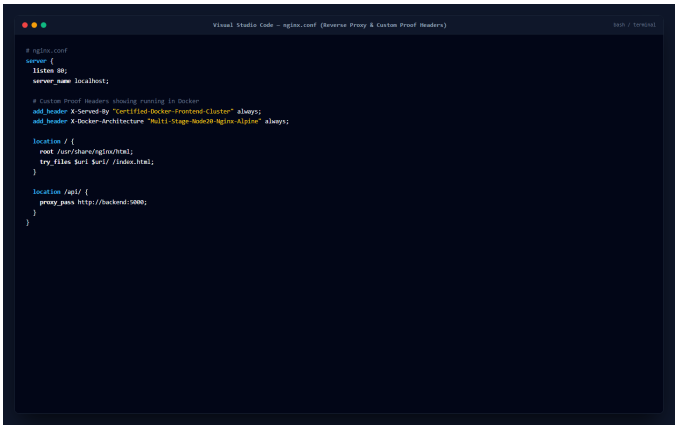

Screen 10.2: Dockerfile.frontend - Multi-Stage Node Builder & Alpine Nginx

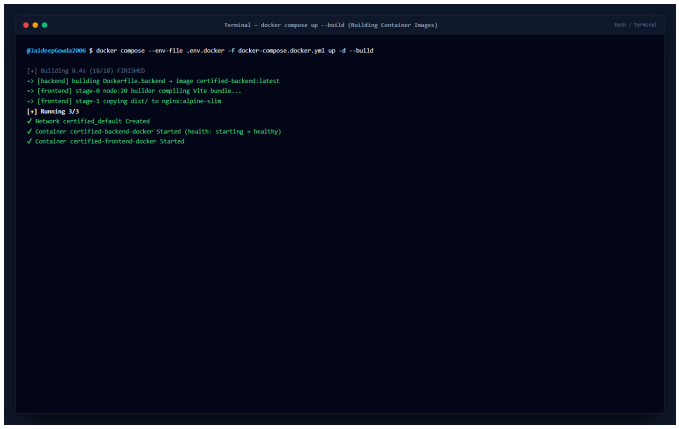

Screen 10.3: docker-compose.docker.yml - Multi-Service Orchestration File

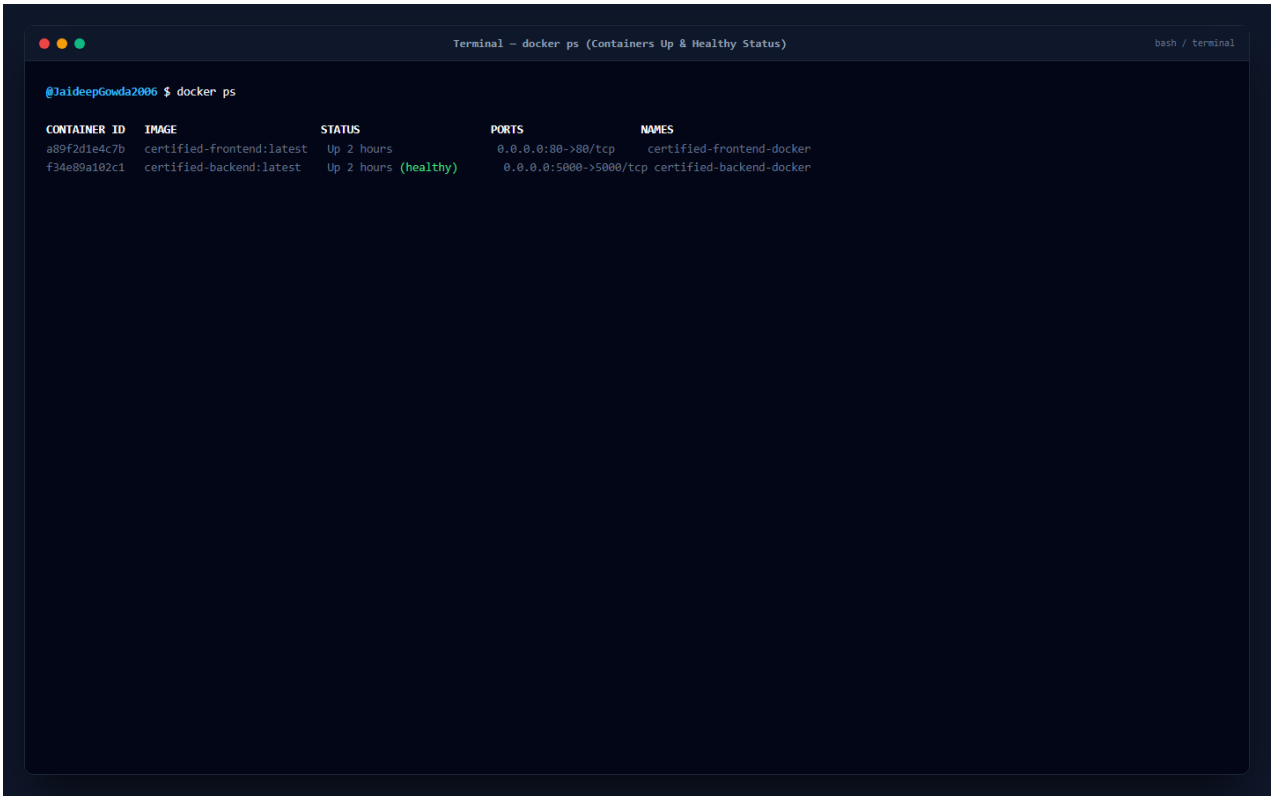

Screen 10.4: nginx.conf - Reverse Proxy & Custom Docker Proof Headers

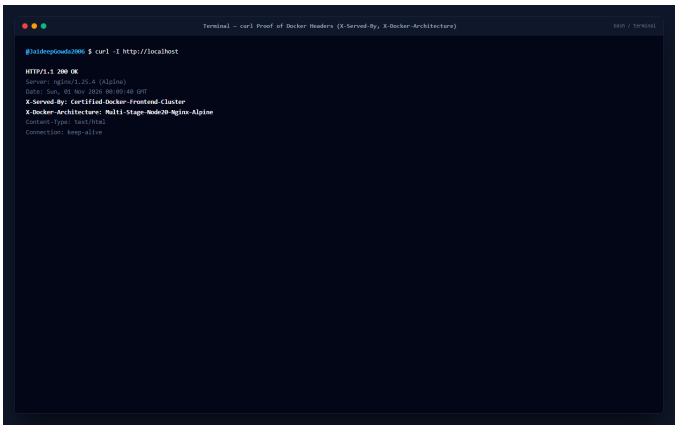

Screen 10.5: Terminal - docker compose up --build Service Initialization

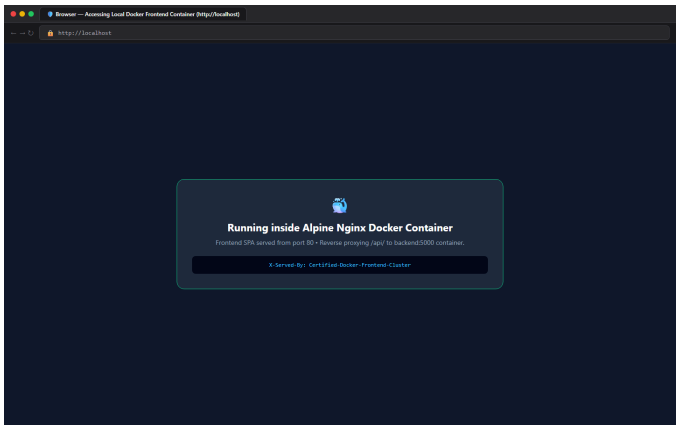

Screen 10.6: Terminal - docker ps Running Containers & Health Status

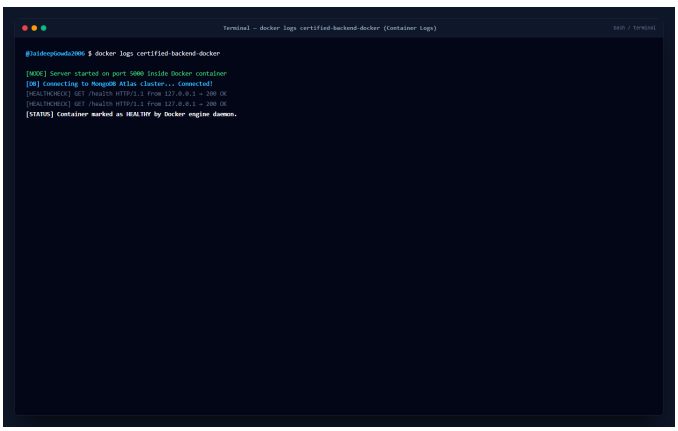

Screen 10.7: Terminal - cURL Response Showing X-Served-By Docker Headers

Screen 10.8: Browser - Localhost Accessing Dockerized Full-Stack App

Screen 10.9: Terminal - docker logs certified-backend-docker Health Checks

Screen 10.10: Terminal - docker compose down Graceful Clean Shutdown
